Attempt : 1
Total Mark : 10
Marks Obtained : 10

Section 1 : Coding

1. Problem Statement

Monica is interested in finding a treasure but the key to opening is to get the sum of the main diagonal elements and secondary diagonal elements.

Write a program to help Monica find the diagonal sum of a square 2D array.

Note: The main diagonal of the array consists of the elements traversing from the top-left corner to the bottom-right corner. The secondary diagonal includes elements from the top-right corner to the bottom-left corner.

Input Format

The first line of input consists of an integer N, representing the number of rows and columns.

The following N lines consist of N space-separated integers, representing the 2D array elements.

Output Format

The first line of output prints "Sum of the main diagonal: " followed by an integer, representing the sum of the main diagonal.

The second line prints "Sum of the secondary diagonal: " followed by an integer, representing the sum of the secondary diagonal.

Refer to the sample output for formatting specifications.

Sample Test Case

Input: 3
1 2 3
4 5 6
7 8 9
Output: Sum of the main diagonal: 15
Sum of the secondary diagonal: 15

Answer

```java
// You are using Java
import java.util.Scanner;

class DiagonalSumOfSquareArray {

public static void main(String[] args) {

Scanner scanner = new Scanner(System.in);

int size = scanner.nextInt();

int[][] arr = new int[size][size];

for (int i = 0; i < size; i++) {

for (int j = 0; j < size; j++) {

arr[i][j] = scanner.nextInt();
```

```java
        }
    }

    int sum = 0;

    for (int i = 0; i < arr.length; i++) {

        sum += arr[i][i];

    }

    int sum1 = 0;

    for (int i = 0; i < arr.length; i++) {

        sum1 += arr[i] [arr.length - 1 - i];

    }

    System.out.println("Sum of the main diagonal:" + sum);

    System.out.println("Sum of the secondary diagonal:" + sum1);

    scanner.close();

    }
}
```

Status : Correct   ***Marks : 10/10***
